

Test Plan Document

Project: Practice Software Testing Web Application.

Prepared by:

- Faris – Software Testing Team Leader.
- Ammar – Software Testing.
- Gody – Software Testing.
- Alaa – Software Testing.
- Mariam Tarek – Software Testing

Date: 55 hours

Version: 1.0

1. Introduction

- **1.1 Purpose:** This document defines the strategy and scope for testing the Practice Software Testing application.
- **1.2 Project Overview:** The project focuses on verifying core functionalities and security features of the e-commerce platform.

2. Test Strategy

- **2.1 Test Levels:**

- 2.1.1 Component Testing: Testing individual modules like 'Login' or 'Search' independently.
- 2.1.2 Integration Testing: Verifying data flow between 'Country Selection' and 'Registration Data'.
- 2.1.3 System Testing: Testing end-to-end flows like 'Product Selection' to 'Check Out'.
- 2.1.4 Acceptance Testing: Validating that all features meet the defined User Stories' criteria.

- **2.2 Test Types:**

- Functional (Manual Testing) and Non-Functional (Security & Performance).
-

3. Test Scope

- **3.1 In-Scope:** Full testing for 18 features including Authentication, Profile Management, Shopping Cart, and Security (MFA/Lockout).
- **3.2 Out-of-Scope:** Physical server-side hosting, database maintenance, and external payment gateway API internal logic.

4. Features to be Tested (User Stories List)

- **4.1 Access:** Country Availability Check.
 - **4.2 Security:** Registration, Login, Forgot Password, Locked Account, MFA, Admin Login.
 - **4.3 Customer:** Profile, Favorites, Invoices, Messages.
 - **4.4 Shopping:** Product Listing (Filter/Sort), Category Page, Product Detail, Shopping Cart.
 - **4.5 Checkout & Promo:** Check Out & Payment, Geolocation Discount, Combined Product Discount.
 - **4.6 Support:** Contact Form.
-

5. Acceptance Criteria (Test Level)

- **5.1 Entry Criteria:** The website environment is stable, and all User Stories are approved.
 - **5.2 Exit Criteria:** 100% of test cases are executed, and all Critical/High bugs are resolved and verified.
-

6. Test Environment

- **6.1 Hardware:** Testing will be conducted on an HP ZBook G5 laptop and a Tecno Camon 20 mobile device.
- **6.2 Software:** Execution via Google Chrome and Mozilla Firefox on Windows 11 and Android OS.

7. Roles and Responsibilities

- **7.1 Test Lead (Faris):** Responsible for planning, reviewing test cases, and final quality approval.
 - **7.2 QA Testers:** Responsible for executing test scenarios and reporting defects in the bug tracking system.
-

8. Dependencies

- **8.1 Data Flow:** According to 'Country Selection', the website will select the relevant pricing and availability.
 - **8.2 Security Status:** According to 'MFA' settings, the system will trigger the relevant TOTP prompt during login.
-

9. Risks and Contingencies

- **9.1 Environment Risk:** Possible downtime of the "Practice Software Testing" website.
- **9.2 Mitigation Plan:** Using local mock-ups or recorded execution videos to proceed with documentation.

10. Test Deliverables

- **10.1 Test Plan Document:** The comprehensive document that defines the testing strategy and scope.
- **10.2 Test Case Document:** Detailed step-by-step test scenarios for all 18 features in the project.
- **10.3 Bug Reports:** Documentation of all discovered defects, including severity and reproduction steps.
- **10.4 Test Summary Report:** A final report summarizing the testing results and the system's readiness for release.
- **10.5 Bug reports (Mobile App):** Documentation of all discovered defects, including severity and reproduction steps.
- **10.6 APIs Testing:** Test all APIs in the system like (Register, Login, Cart and brands).
- **10.7 Automation testing:** Test the site with automation using Selenium.
